### Description

**InQuinox** tackles the most pressing IT storage challenges facing CIOs today: managing the complexity and costs caused by data proliferation. Determined to help IT organizations avoid reactive crises management, which is inefficient, costly and unsustainable, InQuinox is committed to developing the best products for the worst problems. With a depth of industry knowledge, technical expertise and tenacity, InQuinox is poised to pursue market opportunities swiftly to fill voids in partner product lines with an eye towards solving the seemingly intractable problems first.

### Products

**SD<sup>3</sup>** appliance is the first purpose-built appliance for Symantec NetBackup users who want to use PureDisk deduplication software in data centers or remote offices to minimize their data storage footprint and save on energy and maintenance costs. SD<sup>3</sup> simplifies the deployment of a unified hardware and software PureDisk solution and provides a high-performance, scalable, ready-to-use, green deduplication solution.

**SanXfer™** software is the industry's first Storage Area Network (SAN) utility for migrating Windows®-based SAN booting systems to new hardware, regardless of vendor, model or attached devices. For organizations that are not yet booting from a SAN, SanXfer makes it easy to convert a local booting system to a SAN booting system. SanXfer expands server hardware options, simplifies administration and Disaster Recovery (DR), and increases IT environment reliability. Unlike manual migration methods, which are error-prone and can take days to complete, SanXfer accurately replaces, upgrades, clones and provisions servers within minutes. SanXfer makes IT more efficient and lowers operational expenses by improving the use of existing servers while reducing deployment, administration, backup and disaster recovery costs.

### Services

InQuinox consultants are experts in NetBackup, PureDisk, Brocade SAN and the administration of various disk array technologies while having played integral roles in inventing, developing and supporting the Bare Metal Restore option for NetBackup. The company provides a range of onsite consulting services to enterprise data centers, including:

- ▶ **Data Protection** — Installation, configuration, optimization and implementation of Veritas NetBackup, PureDisk, Bare Metal Restore for Veritas NetBackup, Veritas Cluster Server and Veritas Foundation Suite.
- ▶ **Data Center Migration** — InQuinox helps companies migrate their data centers with minimum downtime.
- ▶ **Disaster Recovery** — Using NetBackup and Bare Metal Restore, InQuinox assists in recovering critical data following a disaster.

<b>Strategic Partners</b>	Atrato, Corvalent and Symantec
<b>Founded</b>	2007
