

## SanXfer

The Industry's fastest server and SAN migration tool – now optimized for virtualization and cloud.

Convert existing servers with ease and efficiency. Use SanXfer to create a consistent, repeatable approach to datacenter refreshes and virtualization implementation.

Increase consulting and project revenue. Improve customer satisfaction and success rates. Grow your professional services practice with SanXfer.

## Multiple Editions to meet your IT needs

SanXfer comes in three editions to meet requirements for large datacenter moves, disaster recovery work, and day-to-day server migration and protection.

## Migrate over 150 servers in 24 hours

Use the speed and efficiency of SanXfer to tackle your largest projects. Grow your bottom line and improve customer success in record time. We guarantee it.

## Virtualization Kit for Rapid Datacenter Migration

### Imagine...

...having the tools and procedures to automatically migrate your customer's servers and storage from an old, technology depressed server room to a virtualized, green datacenter through a single, simple-to-use interface. Today, you possess the power to respond and take immediate action with SanXfer.

InQuinox created SanXfer to answer the growing need to simplify the process of moving from an old datacenter to a new one, with complete hardware independence in mind. SanXfer can:

- Move SAN stored data from one vendor's platform to another through a server-directed process
- Migrate local-boot servers into the SAN, leveraging the SAN's built-in capabilities for HA, efficiency, and protection. No software reinstallations required.
- Dramatically reduce deployment time of VMware, Hyper-V, and XenServer through efficient P2V conversions
- Improve customer satisfaction and success by introducing vendor flexibility and an easy approach to rolling back to an original configuration or reversing unsatisfactory changes
- Help you sell more services – build a consulting practice that frees your staff of mundane, error prone techniques commonly used for datacenter refreshes and server upgrades.

### Virtualize your data center with unparalleled efficiency and speed

Confidently embrace a new virtualization or SAN strategy with the industry's fastest and most intuitive utility. Optimized for large-scale virtualization and Cloud rollouts, SanXfer allows you to perform a Physical-to-Virtual (P2V) or Physical-to-Physical (P2P) migration in about 10 minutes. With SanXfer, you have the flexibility to change the storage from which your systems boot, and the type of machine (Physical or Virtual) which actually boots your systems. Is a virtualized approach not working well for some systems? Move them back to physical hardware. Is Fiber Channel storage too expensive and complex? Instead, move to iSCSI. Is Public Cloud storage not secure enough? Deploy a Private Cloud instead. The possibilities are endless. With SanXfer these changes take minutes, not hours or days as with other products.

### Key Benefits...

- Free users from server-hardware, storage, or VM-software lock-in, enabling storage subsystems, servers, or VM software to be replaced without reinstalling any servers.
- Provides fast P2V, V2P, and P2P conversions
- Provides the power to quickly "trial boot" your systems as Virtual Machines
- Optimized for large rolling out of VM and Cloud strategies
- Allows users to replace or upgrade physical servers with any new hardware in minutes
- Reduces unplanned server outages – Dead servers can be back online quickly, running on different hardware or in a Virtual Environment
- Optimized for high speed SAN data transfers by removing traffic from production IP networks
- Automates manual processes thereby eliminating error-prone and time-consuming tasks

**OS Support**

SanXfer supports 32 and 64 bit versions of Windows Server 2008, and 2003 as well as Windows XP, Vista, and Windows 7.

**Technical Support**

We understand the requirements and demands of modern IT solution providers. Our consultants and support professionals are always available for your needs.

**The InQuinox Difference**

InQuinox provides hardware, software, and solutions to the IT industry. At InQuinox, we're committed to delivering the best IT products for the worst IT problems.

**On The Web**

Feature	DC Mover Edition	Cloud & VM Optimized DataCenter Edition	Automated DR Edition
Convert Local booting system into SAN booting system	✓	✓	✓
Convert SAN booting system to a Local disk booting system	✓	✓	✓
Quickly Replace or Upgrade a server to any hardware	✓	✓	✓
Support for local disks, Fiber Channel, and iSCSI	✓	✓	✓
Licensed for a one time use	✓		
Licensed for repeated use		✓	✓
Replace a Physical Server with a Virtual Machine (P2V)		✓	✓
Move from a Virtual Machine back to Physical (V2P)		✓	✓
Fast Provisioning of new servers		✓	✓
Automatic writing into a .VMDK		✓	✓
Automatic loading of VMware Drivers		✓	✓
Remote (DR) site server reconfiguration			✓
Multi-site SanXfer Library Server Synchronization			✓

**Partnering with InQuinox**

Enable your consultants and engineers to complete service projects more quickly and confidently with SanXfer from InQuinox. Our team is comprised of IT industry veterans who know what it takes to successfully solve the toughest technology problems. We pride ourselves on the ability to quickly adapt to the ever changing landscape of enterprise technology. Leverage this knowledge and experience to better serve your customers, whether replacing a single server or performing a large migration to a new datacenter. Contact us today to discuss our unique and flexible partnership opportunities for IT resellers.
